

Integrated VoIP Recording for innovaphone

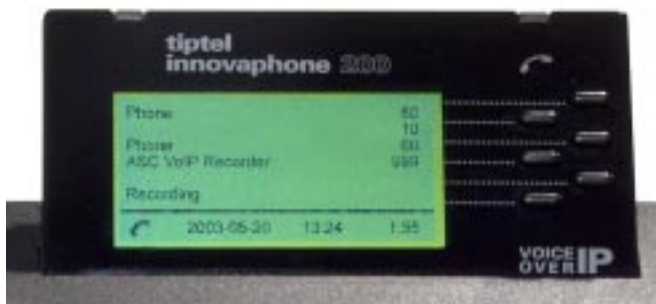

With MARATHON VoIP Collector, ASC offers an entirely integrated VoIP Recording solution for innovaphone products.

innovaphone AG focuses exclusively on the development, production, and distribution of IP-telephony solutions to businesses. Founded in 1997, the German-based company operates throughout Europe with subsidiaries in Sweden and Italy. Every IP solution by innovaphone supports the independent H.323 standard. This ensures that all the advantages of IP telephony - flexibility, investment security, and efficiency - come to full fruition. The key focus for all innovaphone products is convergence, i.e. the integration of ISDN traditional features and quality performance into Voice over IP technology.

innovaphone telephone IP200 - integrated recording features

By combining best of breed technologies, ASC and innovaphone have developed a unique recording solution. The following communications recording features have been integrated with innovaphone IP200 telephones:

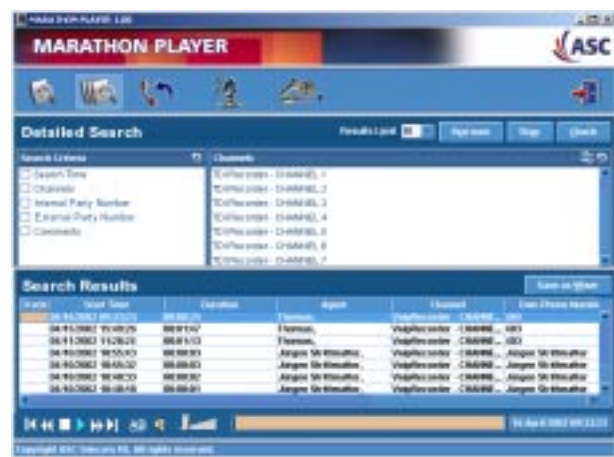

- Automatic recording for outgoing and incoming calls. The recording starts as soon as the call is made.
- Recording on demand, by pressing a key on the keypad. Pressing the re-dialling key starts the recording, which will be either automatically stopped at the end of the call or as per user request by pressing the key again.
- The user receives feedback on the telephone display, if a conversation is being recorded.

Display innovaphone telephone IP200 with integrated VoIP recording

ASC - innovaphone communications recording solution highlights

- Pure software solution for Windows and Linux - no additional hardware investment required
- Records VoIP and traditional telephony on the same platform
- Local storage on hard disk or archive on AIT, DVD or CD
- Active and network independent recording solution – installation is possible in any part of the network
- Cost-effective capturing of all call detail information via H.323 – integration of CTI/CDR is not necessary
- Powerful, browser-based and easy-to-use applications
- Search and replay of calls via ASC applications i.e. MARATHON PLAYER or MARATHON WEB PLAYER

- Simultaneously replay of calls on several channels
- Easy integration of external applications via Application Programming Interfaces (API)
- Selective recording and archiving
- Communications Recording solution based on Linux operating system – reliable, secure and powerful
- Support for MySQL, MS SQL and Oracle databases

Technical Specification

Channels per recorder (PC):	4 - 50 channels
Recording rate:	G.711 A-/μ-law
Online Storage:	
(hard disk = 100 GB)	3.600 hours
(hard disk = 200 GB)	7.200 hours
Expandable online storage:	NAS, DAS
Archiving medias:	0, 1 or 2 DVD-R/-RW drives 0, 1 or 2 DVD-RAM drives 0, 1 or 2 AIT drives 0, 1 or 2 CD-R/-RW drives
Recording modes:	"Active" recording - The IP telephone build up a conference between both of the caller and the recorder.
Platform (hardware and software):	ASC rackmount PC, MARATHON EVOLUTION or standard PC with the following requirements: <ul style="list-style-type: none">- Pentium IV with 1,2 Ghz- 512 MB RAM- 120 GB hard disk- 10/100 MBit Ethernet- Sound card- USB- Archive drives like MARATHON EVOLUTION- Operating system: Windows 2000/XP Professional or Linux (SuSe)
Parameter for call search:	<ul style="list-style-type: none">- Starting time and date- Length of the call- Channel- Call direction- Own telephone number
