Duo (double sided) available	Yes (not tested)
Micro flexible boom available	Yes
Micro fixed boom available	Yes
Over-the-head-style available	Yes
Over the ear available	Yes
Around the ear available	Yes
Miscellaneous	None

## 2.2 Restrictions

The GN2100 is a mono over-the-ear style headset.

## 3 Configuration

### 3.1 IP200

#### 3.1.1 Connected directly to the IP200

The GN2100 can be connected to the headset port of the IP200. The headset will be recognized automatically by the phone. If you see the headset sign in the status line of the IP200 it is ready to use. We achieved best results when using standard IP200 settings (that is, no tweaking of the analogue front end).

### 3.2 IP200A

#### 3.2.1 Connected directly to the IP200A

The GN2100 can be connected to the headset port of the IP200A. The headset detection does not work with the GN2100, so you have to enable the headset manually in the IP200A's settings. We achieved best results when using standard IP200A settings (that is, no tweaking of the analogue front end).

### 3.3 IP100

#### 3.3.1 Connected directly to the IP100

The IP100 does not feature a headset port, so the GN2100 could only be tied in the handset cord. Actually there is no adapter cable available which matches the IP100 requirements.

### 3.4 SoftwarePhone

The GN2100 could be used with the SoftwarePhone. There is an USB Adapter available. Just connect the GN2100 with the USB Adapter and use the buttons to on/off hook, to adjust the volume and the R-key.

Be careful with the microphone gain inside the SoftwarePhone. If it is set to high an noisy echo will appear on the called party side.

for details.

## 5 Remarks

The GN2100 can be worn comfortably over a long period of time. The voice quality is very good for the remote end (that is, the party you are talking to), while it is somewhat compromised at the local end. There is no echo but it is a little bit noisy.

A problem could be the extremely loud call progress tones. If the volume is adjusted for normal speaking the progress tones are gained too high.

It is fine for office use, but rather not sufficient for hard-core use such as in a call centre or the like.
